Choices in Recovery – Research References

This is a list of all research references for Craig Wagner's book, *Choices in Recovery*. It contains active hotlinks to the abstracts, full-text studies, web pages, PDFs, etc. Many links point to the PubMed database at www.NCBI.NLM.NIH.gov/Pubmed (those with PMID/PMCID numbers).

<u>References listed here are exactly the same as those listed in the printed book with a publication date of 2022-09-05.</u> The publication date of the book is found on the first page of the References at the very end of the book.

See www.OnwardMentalHealth.com/book for ordering printed copies of the book.

See www.OnwardMentalHealth.com/resources for a large number of additional mental health resources integrated with *Choices in Recovery*.

30	¹ <u>Note</u> : The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) is the American Psychiatric Association's widely criticized classification and diagnostic tool. A research specialist calls it "astonishingly arbitrary" (Caplan P, http://goo.gl/1UJZxA). The pharmaceutical industry has significant influence on content (69 percent of APA Committee have financial ties to Big Pharma, https://goo.gl/inmdpv). An open letter from the American Psychological Association signed by 13,000 people decried this influence. The Director of the NIMH indicates the DSM-5 has a "lack of validity It is critical to realize that we cannot succeed if we use DSM categories as the 'gold standard' That is why NIMH will be re-orienting its research away from DSM categories." (Insel T, Director's Blog: Transforming Diagnosis, April 29, 2013).

	¹ <u>Note</u> : Medication side effects are a major reason for medication noncompliance (Balon R, Psychiatric Times, 2002, http://goo.gl/ooNawD). Over 70% of patients on antipsychotics describe weight gain from antipsychotic use as extremely distressing (Weiden P et al, PMID: 14693352, http://goo.gl/c5gZl3). 62.5% of men and 38.5% of women felt that their psychiatric medications were causing sexual side-effects, especially
50	important since mental health issues typically hit young adults during their most sexually active years (Rosenberg KP et al. PMID: 14504017. In a 57-clinic study of antipsychotics, 64-82% of patients stopped taking the drugs (Lieberman JA et al, , PMID: 16172203, http://goo.gl/SkDQs8. There are many other side effects including lethargy, tremors and increased risk of suicide.
50	(Rosenberg KP et al. PMID: 14504017. In a 57-clinic study of antipsychotics, 64-82% of patients stopped

92	¹ <u>Note</u> : The pipeline for new psychotropic drugs is slowing Many psychotropics are of the "me too" variety -similar to existing drugs The probability of failure of introducing new drugs, the long drug development cycle (averaging 18 years), the complexity of the brain and the profit erosion by generic drugs all contribute to very high psychotropic drug development costs (http://goo.gl/duIU7Q). It is becoming increasingly difficult for drug companies to justify placing scarce research dollars on mental health efforts.Pharmaceutical companies have reduced research funding for new psychotropics
	(http://goo.gl/ITYv6d).

104	¹ <u>Note</u> : Involuntary treatment presents a contentious ethical dilemma. Particularly those who have experienced assisted/involuntary drug treatment, are often strongly against such laws citing the debilitating side effects of psychotropics, increased risk of suicide, studies that show that the laws offer little/no value, lack of emphasis on recovery, the loss self-determination and more. A UN expert called for a ban categorizing it as a human rights violation (http://bit.ly/2LzxLl5, http://bit.ly/2xoBVKy).
